EDUCATION

Purdue University — **West Lafayette, Indiana**

Bachelor of Science (Double Major): Game Development, Animation and Visual Effects — *Aug. 2023 - Present*

- GPA: 3.52 / 4.00

SKILLS

Design: Level Design, Systems Design, Game Design Documentation, Character Design.

Tools: Java, C++, Maya, Unreal Engine, Photoshop, Procreate, Houdini, Blender, Microsoft Office.

EXPERIENCE

Summer Intern — June - Aug. 2025

Shanghai Zhongshun Hengxin Network Technology Co., Ltd. — *Shanghai, China*

- Developed enemy AI behaviors, including movement logic, decision-making patterns, and combat interactions.
- Implemented and integrated approximately 10 enemy abilities, including visual effects, damage calculations, and attack range configuration.
- Assisted the studio with pre-launch game testing, reported approximately 30 bugs, and provided design improvement suggestions for core gameplay mechanics.

University Game Design Project — Jan. - July 2026

Purdue University — *West Lafayette, Indiana*

- Independently designed and iterated on 30 levels (25 standard levels and 5 special-structure levels), responsible for layouts, player routes, spatial structure, and level pacing, while optimizing spatial readability and area connectivity for a 2.5D top-down perspective.
- Designed encounters and enemy spawn layouts, adjusting spawn points, combat spaces, occlusion, and encounter intervals to ensure that different enemy combinations randomly generated from a shared enemy pool could still provide stable and controllable combat experiences.
- Responsible for level visuals and gameplay implementation, using materials, textures, model combinations, and lighting to establish visual distinctions between different areas, while continuously adjusting key item placement, enemy positions, and level completion conditions based on playtesting results.

University Game Design Project — Aug. 2025 - May 2026

Purdue University — *West Lafayette, Indiana*

- Completed multiple thematic concept designs, providing foundations for worldbuilding, enemies, bosses, and visual direction for subsequent level development.
- Responsible for the fairy-tale-themed level design, continuously iterating from 2D sketches to terrain, layout, and player routes.
- Adjusted area connections, spatial scale, and visual hierarchy based on the actual terrain to improve exploration flow and spatial readability.
